

Cephalopods

are the amazing group of animals that includes the octopus, squid, cuttlefish & nautilus!

They are cousins of snails & clams (all mollusks).

Created by "Everett" Taylor, the ocean-loving husband and wife children's book author team.

The soft body of the octopus can squeeze into tiny spaces.

Octopuses have a rectangular-shaped pupil in each eye!

They're intelligent & crafty, just like you!

What's the plural of octopus? Octopuses & octopi are both right.

Many cephalopods have an ink sac to help them escape a predator and disappear in a flash!

Count 'em up: octopuses have 8 arms with suction cups for grabbing food.

Cephalopods have color-changing skin to help them camouflage and communicate! Their secret? color-changing cells called chromatophores
